

Sycous Power BI Integration

Our use of Power BI allows us to also provide **visual performance dashboards**.

We do not simply provide a reporting pack but focus on dashboard insights, with reports providing back-up data.

This ensures an efficient focus on key issues, which can then be highlighted.

Sycous Power BI Integration

Our systems are built for analytics.

This can include high level summaries of individual network performance, normally as a visual dashboard that compares different networks, identifying the worse and best performances, as well as significant changes. This analysis can be shared with the plant maintenance provider, informing their own maintenance activities.
